| Piece 4 | My prediction | My measurement to the nearest whole unit |
| :--- | :--- | :--- |
|  |  |  |

Was each string you measured a size that could be given in whole units?

If a string you measured was not exactly to a whole unit, how did you decide what the length was?

If you measured the length of a string and it was longer than 3 units, but shorter than 7 units, what are some of the lengths it could be?

If you measured the length of a string and it was longer than 4 units but less than 5 units, what are some of the lengths it could be?
