

Arrow Cards (10 to 19)

I am learning to read and tell which selected numerals from the range of 10 to 19 are greatest.

Materials:

arrow cards: one set of single-digit arrow cards per small group and one "10" arrow card per student

Directions:

1. Give each player a "10" arrow.
2. Place single digit arrow cards face down in a stack.
3. Each player will draw 1 single digit card, place it with the "10" arrow and read the number.
4. Players work together to put numbers in order.
5. The player who created the largest number gets a point.
6. Shuffle cards and replay.
