Arrow Cards (10 to 9,999)

I am learning to read and tell which selected numerals in the range of 10 to 9,999 are greatest.

Materials:

arrow cards: one set of ones, tens and hundreds, thousands arrow cards per group

Directions:

1. Place each type of arrow card in a stack face down. There will be 4 stacks.

2. Each player will draw 1 arrow card from each stack, place cards together to make a number and read the number.

3. Players work together to put numbers in order.

4. The player who created the largest number gets a point.

5. Shuffle cards and replay.
