

Pyramid (Make 20, double 10 frames)

I am learning to tell 2 numbers that go together to make 20.

Materials:

double 10 frame cards 0 to 20 - 2 of each

Directions:

1. Get double 10 frame cards, 0 to 20, 2 sets. Shuffle.
2. Take one card from the deck. Set aside as a "mystery card" (don't look at it).
3. Place cards in a 5 by 5 array face-up.
4. Player 1 selects 2 cards that together make 20.
5. Player 1 replaces the open spaces with cards from the deck.
6. Players take turns.
7. When there are no more cards in the deck, play continues until only 1 card is remaining.
8. Players should predict the number on the mystery card based on the card left in the pyramid.
