

Top-it (total to 20)

I am learning to add quantities with addends up to 20 without counting by ones. I am also learning to explain how I combined two quantities.

Materials:

ten grid cards (From Great Source) or 10 frame cards

Directions:

1. Deal out all cards evenly to players.
2. Each player will draw 2 cards, look at them quickly and place them face down.
3. Each player will say aloud his or her sum, show the cards to the group and explain how the sum was determined.
4. The player with the largest sum collects the cards.
5. Repeat until cards are gone.
6. Player with the most cards wins.
7. Shuffle and play again.
