

## **Bingo Addition (13-20)**

**I am learning to use a known fact to mentally solve addition tasks.**

### **Materials:**

Bingo Boards filled with numerals 13 - 20, Bingo covers, double 10 frame cards 9 to 11 (several of each), numeral cube 4 to 9

### **Directions:**

1. Each player should have a Bingo board (13 to 20), covers and cube.
2. Shuffle the frame cards and place, face-down, in a stack.
3. Player 1 rolls the cube, draws a card and tells the total. All players cover the total.
4. Players take turns rolling the cube, drawing a card and telling the total. Each time all players cover the total.
5. Players continue taking turns, the first player to have a Bingo wins.
