

Bingo Addition (10+)

I am learning to match equivalent addition expressions.

Materials:

Bingo Boards filled with expressions $10 + 1$ to $10 + 8$, expression cards with sums in the range 11 to 18, bingo covers

Directions:

1. Get Bingo boards, expression cards and covers.
2. Player 1 shuffles and stacks cards face down.
3. Player 1 turns over an expression card and reads it to the group.
4. Each player will cover an expression on his/her board that matches the card.
5. Players take turns turning over and reading an expression card.
6. After each new card, all players will cover an expression that matches the card.
7. The first player to get a Bingo is the winner.
