

Making Rectangles

I am learning to tell the number of squares (within 32) in a hidden rectangle if someone tells me the number of rows and the number in each row. I am also learning to write the number sentence for each rectangle built.

Materials:

Color Tiles - 32, writing space

Directions:

1. Get 32 color tiles and writing material.
2. Player 1 hides their eyes.
3. Player 2 builds a rectangle using some color tile squares (from 12-32) and covers the rectangle.
4. Player 2 give player 1 a quick peek and tell the number of rows and the number in each row.
5. Player 1 tells the total number and tiles by imagining the rectangle.
6. Player 1 writes the multiplication sentence for the rectangle.
7. Players take turns and repeat.
