

Equal or Not?

I am learning to compare multiplication expressions.

Materials:

writing space

Directions:

1. Get writing materials.
2. Play "Equal or Not?" Each player will write an equation with three factors on each side.
3. Player 1 asks player 2 if the statement is true. If the statement is true write a checkmark underneath of it. If the statement is false put a slash mark through the equal sign. Each time a player answers correctly (and explains their thinking) they earn a point.
4. Player 2 will repeat the process.
5. The game ends when both players have had 5 turns.
6. The player with the highest total points after the end of all 5 turns wins.
