

Pop Drop Move-It (2 & 5)

I am learning to determine products involving a factor of 2 or 5 with support of materials.

Materials:

Set of 10 dotted popsicle sticks with 2 or 5 dots, Pop Drop Move-It game board (multiples of 2 and 5), recording sheets.

Directions:

1. Get the set of sticks with 2 dots, the set with 5 dots and the game board.
2. Each player will get exactly 8 counters.
3. Take turns. On a player's turn, the player:
 - a. will choose either the 2 dot or the 5 dot sticks and drop them
 - b. determine the number of dots that are **face-up** and cover that number on the board
4. If a player gets a number that is already covered by the other player, he/she can tell the player to "move it" and put his/her counter on that number.
5. The first player to use all of his/her counters wins.
