

Pop Drop Move-It (2&4)

I am learning to determine products involving a factor of 4.

Materials:

Multiplication Move-It game board (multiples of 4), two number cubes, recording sheets

Directions:

1. Get 2 number cubes, counters, recording sheet, and game board.
2. Each player will get exactly 8 counters.
3. Take turns. On a player's turn, the player:
 - a. will roll the number cubes and add them together.
 - b. multiply the number by 4 and record the equation on the recording sheet.
 - c. cover that number on the board.
4. If either player rolls and gets a number that is not available and is already covered by the other player, he can tell the player to "move it" and put his counter on that number.
5. The player who uses all his counters first wins the game.
