

Cups O' Gold

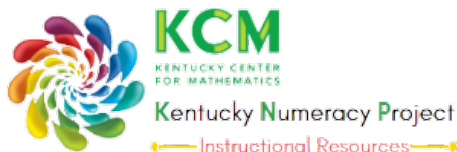

I am learning to mentally add and subtract within 100.

Materials:

arrow cards (tens and ones), writing space

Directions:

1. Player one will select a 2-digit and a 1-digit arrow card. Player two will select a 2-digit and a 1-digit arrow card. The player with the greater number will decide which player gets the number (of gold pieces) represented by the lower number and which gets the number (of gold pieces) represented by the difference between the greater and lower number.
2. Each player records the number of gold pieces earned in each round.
3. After two rounds, the player with the greatest number of gold pieces wins.
