

Build a Number

I am learning to model a two-digit number using bundles and sticks to represent tens and ones.

Materials:

Popsicle sticks grouped into bundles of 10 and several loose sticks, ones and tens arrow cards

Directions:

1. Get the tub of bundles and sticks and place where all players can reach.
2. One player will randomly draw a "ones" arrow and a "tens" arrow and put them on the table for all players to see.
3. Each player will use bundles and sticks to make the amount shown.
4. Compare answers and make sure everyone is correct.
5. Work together to find at least two different ways to make the amount shown.
6. Take turns drawing arrow cards for the group.
